

GREENBRIER AMBLEWAGON

As new in design & as modern in concept as tomorrow!

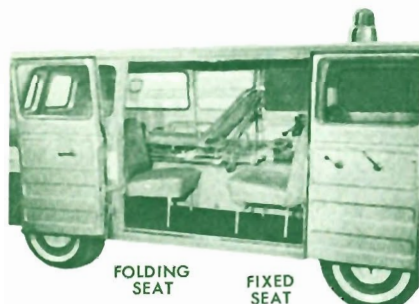

Loading is easy and quick through the full opening rear doors which swing back completely out of the way. Conversion can include either one or two attendant seats, one of which folds into the floor to accommodate a second cot or an emergency stretcher. There's plenty of room for two cots and an attendant's seat in the patient's compartment.

Storage compartments for linens and other equipment as well as spare tire space are provided under the left hand floor extension.

Modern styling combined with passenger car ride and extreme maneuverability make this the perfect ambulance for congested urban areas. Note the double side doors which allow side as well as end loading — an important safety feature!

The front seat accommodates three passengers comfortably as there is no tunnel hump at all in the floor.

As shown below, the heart patient can sit straight up. Also there is plenty of length to handle long traction leg splints, etc.

The patient's compartment is 107" long, 41" high, 44" wide — loads of room to accommodate any special equipment such as medicine bar, piped oxygen, auxiliary heater, extra stretcher, etc. The attendant can move about freely to serve his patient — especially good for maternity cases.

**LARGE ENOUGH TO HAUL THE BIGGEST
ROUGH BOXES AND CASKETS WITH EASE**

A suggested grouping of conversion items for a complete ambulance will be found on attached Amblewagon form 61-7A. For additional accessories see Amblewagon form 61-6.
