TECHNICAL SERVICE BULLETIN

Technical Service Department

SUBJECT: 1963 GENERATOR/REGULATOR
AND BATTERY LINE-UP

BULLETIN NO. DR # 564

SECTION VIy

TO: ALL CHEVROLET DEALERS

DATE December 4, 1962

The following chart may be used as reference for checking standard or optional generator/regulator and battery combinations on all 1963 vehicles.

It should be noted that the 5 1/2" Delcotron is available in four different amperage output ratings: 4-32, 9-37, 12-42 and 5-52 amps, yet all are physically interchangeable. (The first number in the output rating indicates output at idle, the second number indicates maximum output).

The 4-32 and 9-37 amp units are factory installed only; when these generators are replaced in service, they are replaced with either the 12-42 or 5-52 amp Delcotrons.

* These part numbers included for reference only. Part numbers 1100629 12-42 Amp. and 1100633 5-52 Amp. used as service replacement.

** Last three digits of part number are stamped on the top edge of the battery case. Part numbers in this column are catalogue numbers for dry-charge service batteries only (identified by yellow case). Factory-installed and service batteries, when placed in vehicle, will be stamped one number lower. Example: 1980555 44 4-H Battery stamped "554".

This part number included for reference only. Part number 1102227 30 Amp. used as service replacement.
